

# 2022 Annual Report

# A message from our Executive Director

---

## *Giving Salmon A Chance*

It has been wonderful to see the magic of salmon and the harvests and celebrations by communities across the Skeena and beyond. This year's strong return of sockeye and improved returns of Chinook, Steelhead, Chum, and Pink are a direct result of their sheer resilience and the actions we have all taken to protect fish under the growing pressures of climate change.

In addition to celebrating salmon, SkeenaWild is celebrating 15 years as an organization and reflecting on our work, our successes, failures, and where we need to go from here.

It is difficult to measure success in a time of rapidly changing environmental conditions. In thinking about this I try to imagine what the Skeena, its salmon, landscapes, and communities would look like in our absence.

SkeenaWild has played a major role in reducing harvest pressures, enabling selective fisheries, improving accountability and in-season fisheries management, and undertaking science that has informed protections and rebuilding efforts.

We are fortunate to have played a role, along with so many others, in protecting salmon habitat – stopping thousands of coal bed methane wells from being drilled in the Sacred Headwaters, stopping an ill-conceived oil pipeline from crossing the watershed, and preventing large-scale development otop of the most important salmon habitat in the Skeena estuary.

Educating the public and kids on the importance of salmon and the impacts of climate change and pushing for forestry and mining practices that protect water and salmon are also things we are proud of.

In doing this work we have also made mistakes – at times being confrontational instead of collaborative, failing to keep folks updated and engaged, and failing to take on important issues. We still have a lot to learn but are proud that our efforts, in collaboration with so many, have resulted in hundreds of thousands more salmon and steelhead returning to our rivers.

For us, fifteen years is just the beginning. We understand that good conservation outcomes require a lifetime of work. The challenges salmon face aren't going anywhere, and we remain committed to giving salmon a chance. We see many opportunities moving forward – things like shifting mindsets, supporting land use and estuary planning, implementing fisheries that are adaptable and selective, reducing Alaskan interception, and helping permanently protect critical habitats.

We can't achieve our goals without you and hope you will continue helping make sure salmon are here for the long haul.

# Our Mission

Salmon are the backbone of the diverse cultures, economy and ecosystem in the Skeena region. Protecting this iconic species is fundamental to maintaining and building a healthy watershed and local communities.

**SkeenaWild's mission is to make the Skeena watershed and nearby coastal communities a global model of sustainability.**

This means bringing rigorous science to communities and all levels of government to inform decisions and strategies which protect and rebuild our wild salmon populations. Policy and legislative reform touches everything we do at SkeenaWild. Reforming outdated policies and ensuring good legislation that centers salmon and people are key to defending the health of our communities and the resources that we depend on.

*"To do good, you actually have to do something. SkeenaWild has a track record of getting things done. That's why I've been supporting their work over the past decade"*

*-Yvon Chouinard, Founder of Patagonia Inc & 1% for the planet*

# 2022 Highlights

## Morrison Mine Rejected

After two decades of opposition, the BC government turned down the open-pit copper, gold, and molybdenum mine proposed for the shores of Morrison Lake, critical Skeena salmon habitat. SkeenaWild provided support to Lake Babine and Gitksan Nations and participated in the BC Environmental Assessment.

## Polluter Pays

In April 2022, following the release of our Dirty Dozen report, The Ministry of Energy, Mines, and Low Carbon Innovation released an interim policy detailing the financial bonding mines are required to pay upfront for clean up. This is a significant step toward encouraging mining companies to minimize the environmental damage and reduce public liability to cover reclamation costs, which was last reported at \$1.1 billion.

## Strong Salmon Returns

The story of the Skeena fisheries this season was mostly good news. The stronger returns many salmon populations experienced is likely due to cooler North Pacific Ocean temperatures in recent years. This resulted in more (and fatter) food, combined with more precautionary harvest and relatively good health of habitats compared to other regions.

We've worked hard to ensure that Skeena salmon and their habitats are at the forefront of decision making. Our work has directly resulted in more salmon reaching their spawning grounds over the past 15 years, so that when cool ocean conditions occur, we see strong returns which support vibrant fisheries.

One of these is the Lake Babine Nation commercial fishery that SkeenaWild has been supporting for many years. This fishery targets surplus enhanced sockeye. In 2022, 500 thousand sockeye were harvested, making it one of the largest commercial fisheries in BC – demonstrating the success of one of the most selective and sustainable fisheries in the world.

# 2022 Highlights

---

## Willow Creek Habitat Restoration

SkeenaWild partnered with Kitsumkalum Nation to rehabilitate the Willow Creek riparian habitat, a Kalum River tributary. Juvenile Coho were seen in the Creek's project area this fall...an encouraging sign of success in the restoration of this suburban salmon habitat!

## Youth Education

43 Classroom workshops were delivered to 810 students and educators in 12 schools and 5 communities in the Skeena watershed! 455 students and teachers from 6 schools participated in our outdoor field school covering themes from salmon life cycle, habitat, and watersheds to understanding local ecosystems and climate change.

## Improved Chinook Management

After years of advocating with Indigenous partners, DFO finally agreed to develop an abundance-based management plan for Skeena chinook. This plan will improve management by protecting the run at lower returns and allowing harvest at moderate and strong returns.

# 2022 Lowlights

## Ecstall River Landslide

---

The Ecstall River is a large tributary of the Skeena River near Prince Rupert, supporting valuable chinook, sockeye, steelhead, coho, chum and pink. On Sept 1, a massive landslide wiped out the upper reaches of the River Valley, potentially devastating critical salmon and steelhead habitat. SkeenaWild is in the early stages of developing a monitoring program to better understand longterm impacts.

## Telkwa Coal

---

Tenas Coal Project is proposing an open pit coal mine just south of Telkwa BC, that would extract 750,000 tonnes of metallurgical coal per year for 25 years. This project could have major impacts on communities, salmon habitat, groundwater and the dwindling Telkwa Caribou herd.

SkeenaWild worked with community groups, scientists, engineers, and Indigenous Nations on a thorough technical review of the Tenas Coal proposal, identifying numerous concerns related to the mine's likely impacts to water and fish, especially steelhead. Learn more [here](#)

## Conservation Land Cancellation

---

Between 2018 & 2020, the BC Ministry of Forests, Skeena Region cancelled the bulk of the Conservation Lands. These areas were designated under the Land Act and land use planning to protect critical habitats and important recreational areas. The removals occurred without adequate consultation with government conservation lands personnel and no notice or consultation with land & resource plan implementation committees, Indigenous Nations, local governments or the public in general.

We're exploring avenues for legal re-establishment of these conservation lands and recreation use areas. Many of them provide an important role in watershed hydrology, stream area protection and juvenile fish habitat.

# Program Updates

# Fisheries

We collaborate with First Nations, the Department of Fisheries & Ocean, harvesters and conservation partners to reduce impacts on vulnerable populations, expand selective fishing, and develop and implement rebuilding plans.

Through the Integrated Harvest Planning Committee, a multi-stakeholder process, SkeenaWild advocates for the development of abundance-based management plans for all species. We continue to push for precautionary fisheries and sustainable harvest opportunities.

Throughout the season, we participate in weekly calls with DFO, providing feedback on fishing activity and monitoring the health of returns.

We're working with our partners to ensure that DFO is integrating more ecosystem and climate change assessments into decision-making, and following through on their rebuilding commitments.

## 2022 Returns

### 4.33 M SOCKEYE

This year, the Skeena River saw 4 million sockeye, twice the average for the last decade, allowing for strong food, recreational, and commercial opportunities.

### 45 K CHINOOK

Skeena Chinook return was double what was forecast and double last year's return, but below the long term average. Sport and commercial fisheries that target Skeena Chinook were closed and reduced.

### 15,680K STEELHEAD

While still below the historical average, this year's summer steelhead run was three times that of last year's record low return. If poor returns continue in the future, action to reduce impacts will be needed.

[Learn More](#)

## Pacific Salmon Strategy Initiative (PSSI)

---

With our partners at the Marine Conservation Caucus, we're improving the impact of Canada's historic \$647M investment to stop the declines and rebuild Pacific salmon. There are four pillars that direct DFO to reform harvest and hatcheries, protect and restore habitat and improve collaboration.

**Implementation of science-based recovery plans for endangered salmon populations is the most important objective and could help address the full suite of threats we are tackling. We're providing input on each strategy and developing an independent annual audit of the program.**

## Pacific Salmon Commission

---

SkeenaWild has held a seat on the Northern Panel of the Pacific Salmon Commission for the past 12 years. We are working inside the process to pressure Alaska to reduce interception of BC salmon and steelhead. We received commitments in the new treaty to reduce impacts on Skeena and Nass sockeye during low return years. We've also been collecting and improving information on Alaskan harvests of BC salmon. This information will be critical in bringing conservation measures into the Pacific Salmon Treaty in the future.

## First Nations Selective Fisheries

---

SkeenaWild is supporting and exploring opportunities to expand selective fisheries in the Skeena watershed, like the pound trap and floating fish trap initiatives in the Skeena estuary and river. We have worked for over a decade to help Lake Babine Nation expand commercial sockeye fisheries in Babine Lake. This fishery is now one of the most sustainable fisheries in the world as it completely avoids weak populations and other species of salmon while providing local employment for remote communities. In 2022, due to the strong sockeye return, the Talok Fisheries was one of the largest commercial fisheries in Canada.

# Alaskan Fisheries

---

**Alaska fishers continue to catch more Canadian fish than Canadians.**

Our salmon swim through Southeast Alaska before entering Canadian waters and an increasingly large portion of Skeena salmon and steelhead are caught in Alaskan fisheries, threatening food security for First Nations, reducing opportunities for commercial and recreational fisheries, and reducing food availability for wildlife.

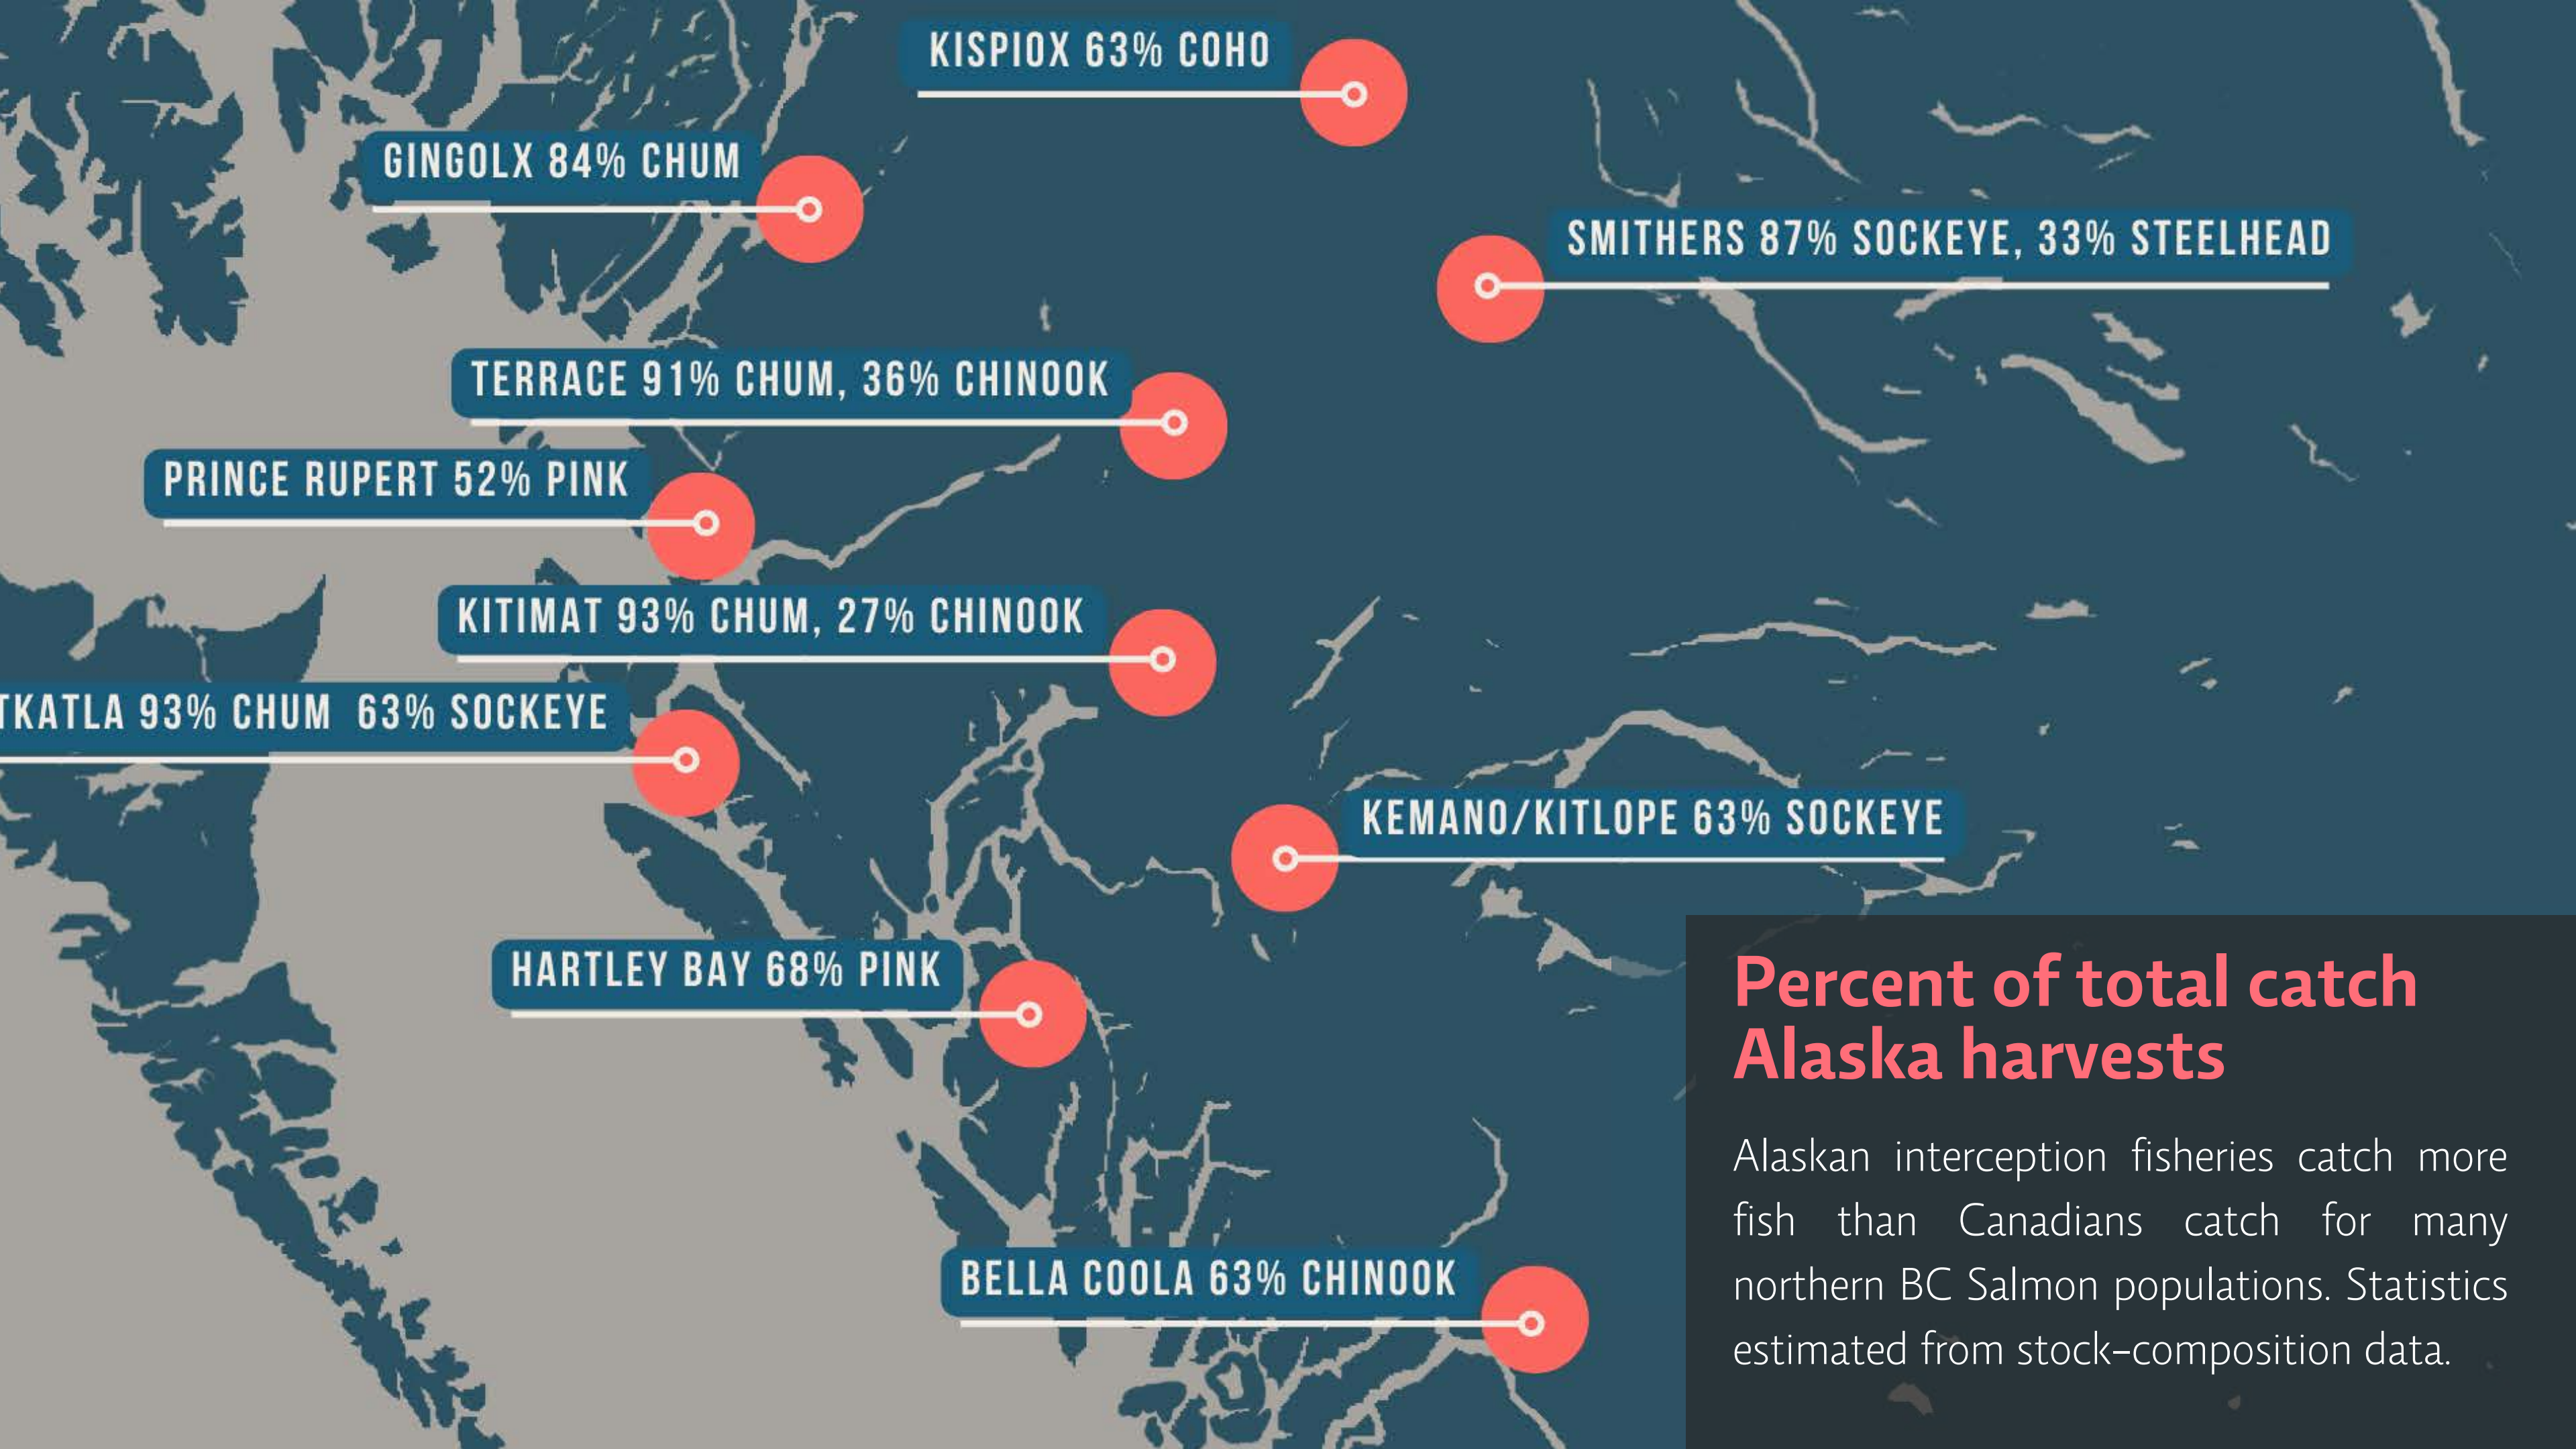

**Through our joint campaign with Watershed Watch Salmon Society – AlaskasDirtySecret.com – we are calling for immediate changes to the Canada/US Pacific Salmon Treaty.**

**OVER 1,300 LETTERS** have been sent to the fisheries minister asking her to address Alaskan interceptions. It was a busy year, but we are just getting started.

[\*\*Learn More\*\*](#)

## Percent of total catch Alaska harvests

Alaskan interception fisheries catch more fish than Canadians catch for many northern BC Salmon populations. Statistics estimated from stock-composition data.

# SkeenaWild Science Program

---

SkeenaWild undertakes scientific research on salmon and salmon ecosystems. In addition to ongoing fisheries and Wild Salmon Policy related research, we have five science programs underway:

- Rebuilding Plans for diminished salmon populations
- Skeena Sockeye Century Project
- Characterizing sockeye distribution in the Upper Bulkley River
- Response of salmon to climate and land-use change
- Millennial changes in salmon populations.

SkeenaWild Science Director Michael Price completed his doctoral thesis at Simon Fraser University earlier this year. Congrats Mike! His research explored the influence of climate, fishing, and artificial enhancement on Skeena sockeye populations over the last century. Mike used fish scales as a window into the past. Through DFO archives, he accessed a unique collection of sockeye salmon scales from fish caught in commercial fisheries at the mouth of the Skeena River beginning in 1913, and compared the information concealed within these scales with fish from the modern era.

Mike continues to merge his research into SkeenaWild initiatives, including Salmon Rebuilding Plans and the Skeena Sockeye Century Project and now his post-doctoral research in collaboration with Gitanyow Nation, Simon Fraser's Salmon Lab, DFO, and Skeena Fisheries Commission. This research explores the evolution of salmon habitat following glacier retreat and forest removal. The aim is to understand how salmon populations will respond to climate change and land-use development, and to identify and protect future climate refuge habitat for salmon.

# Science & Research

*Much of SkeenaWild's science effort this year has been focused on the Rebuilding Plan for Morice sockeye in Wet'suwet'en territory, made possible through the federally and provincially co-funded British Columbia Salmon Restoration and Innovation Fund (BCSRIF). We successfully completed year 2 of 3 which was composed of three major projects:*

## **Rebuilding Plans**

### **1 Tracking Sockeye Salmon Spawning**

This summer, we wrapped up year 2 of a study that tracks sockeye back to spawning grounds. Fish were inserted with tags at Witsset Canyon that transmit a signal, which we track via helicopter and fixed stations located at strategic sites throughout Wet'suwet'en territory. We are using environmental DNA technology (filter water samples for DNA shed by the presence of species) to monitor glacially dominant stream habitats not historically known to host salmon.

### **2 Nanika River Habitat Assessment**

Summer 2022 was year 2 of a study to assess the change in riparian habitat of the lower Nanika River due to forestry and associated road building. The Nanika River hosts the primary spawning grounds for sockeye in Wet'suwet'en territory, yet this sub-basin remains largely unprotected. The end goal is to restore any degraded areas and help the Wet'suwet'en seek permanent protection for this important river.

### **3 Juvenile Health Monitoring**

This spring, we launched year 1 of a study that live captures juvenile sockeye emigrating from Morice Lake, with the aim to determine age at emigration, size at age, and ultimately to explore whether mortality during this life stage is impeding the population's recovery.

[\*\*Learn More\*\*](#)

# Mining Reform

---

Impacts from mining are a growing concern in the Skeena Watershed. Open pit mines pose significant threats to salmon and steelhead due to metal and acid contamination, and communities dependent on nearby water sources. In collaboration with our many partners, we've doubled efforts to bring 100-year-old mining laws into the 21st century and better understand the impacts on fish and water.

We're assessing impacts on water and fish from mines in the region, working with Indigenous partners to implement better monitoring and treatment, bringing new mining protocols into Indigenous-led land use plans, pursuing academic publications, and researching compliance violations from a variety of mines in BC.

[Learn More](#)

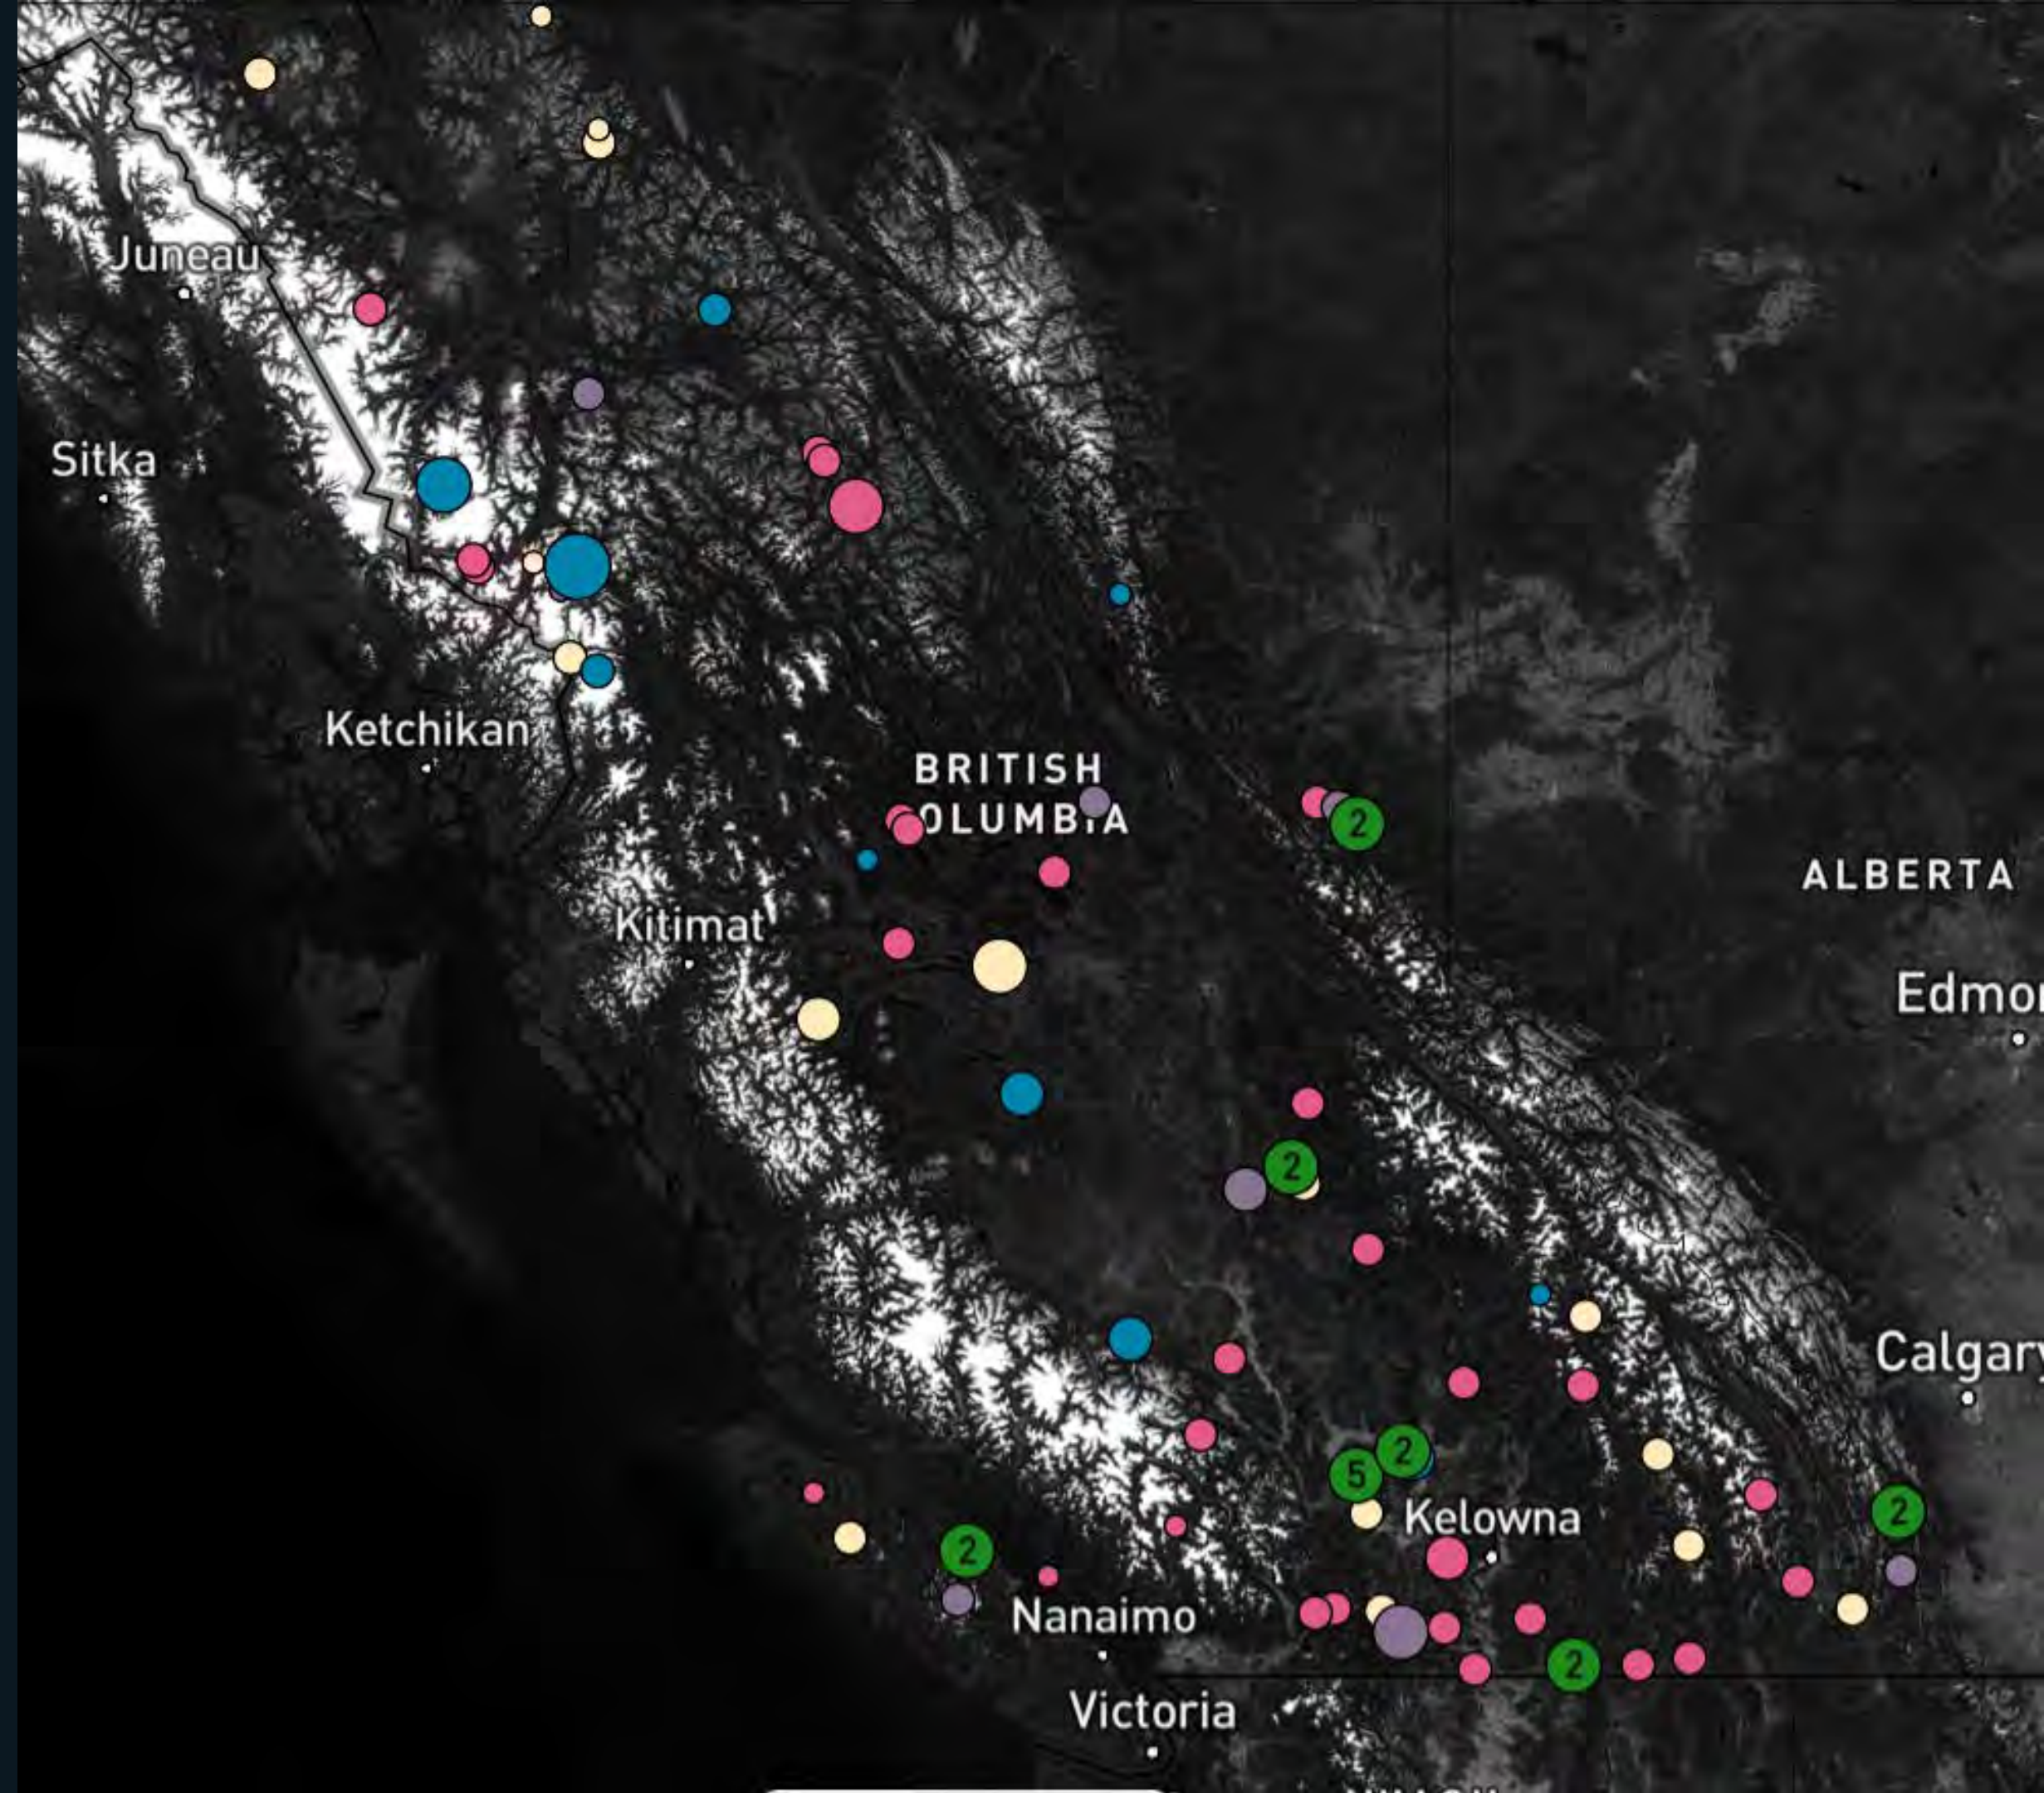

# A Toxic Legacy

---

In collaboration with the BC Mining Law Reform network, we produced an interactive online map of mine sites with tailings facilities. The map provides communities with information about the risks posed by billions of cubic metres of toxic wet mine waste, called tailings, stored behind some of the highest dams in the world.

Alongside the map, we commissioned Dr. Steven Emerman, a respected geophysicist and international expert specializing in groundwater and mining, to review the 86 existing and proposed mines with tailings facilities in BC. Extreme weather, such as the atmospheric rivers BC experienced in 2021, is exacerbating the risk that tailings dams could fail.

[Learn More](#)

# Policy Reform

---

Reforming outdated policies and ensuring good legislation that centers salmon and people are key to achieving the long-term systemic changes needed to secure the health of our communities and the resources that we depend on, including salmon, clean water, mining, and forests.

We made strides to ensure that the new Fisheries Act is robust and we continue to work collaboratively with our conservation partners to ensure it's fully implemented.

We're working with a coalition of scientists from BC, Alaska, and Washington to push for mining law reforms across British Columbia and Alaska.

# Land Use Planning

---

Indigenous community-led land use planning is one way in which reconciliation can be operationalized. Our long-term goal is to move from outdated forestry practices and land use plans that do not protect functioning habitats to detailed spatially-explicit land use plans that protect wildlife, ecosystems, culture, and local economies. These land use plans detail how, when, and where development can occur. With some Indigenous-led land use plans already operationalized in the Skeena Watershed, it's clear they provide guidance and certainty for sustainable rates of resource development, foster positive respectful relationships, help promote long-term ecological resilience, protect shared values, and maximize benefits to local communities.

SkeenaWild's experienced land use planning team is working closely with Gitxsan hereditary chiefs and the Gitxsan Laxyip Management Office to facilitate the development of community-led land use plans for all Gitxsan Watershed Groups that have asked us for help.

[Learn More](#)

# Babine River Watershed

---

The Babine watershed, an important tributary to the Skeena, hosts some of the highest densities of salmon and grizzly bear populations in North America. While some protections exist for the Babine River corridor, tributaries such as the Shelagyote and other critical habitats need protection. Development pressures within the Babine are mounting as forestry cutting permits are issued and a pipeline is proposed for the northern part of the River.

In collaboration with our partners, we are working to improve management and increase protections. We've identified areas that are at risk of losing hydrologic function, at-risk habitats, and those most heavily impacted and in need of attention.

# Education Program

## INSPIRING THE NEXT GENERATION OF SKEENA WATERSHED STEWARDS

Since 2018, we've been reaching youth in the classroom and community. Our Environmental Educator shares her passion for science, salmon and our watershed with hands-on, educational (and fun!) activities and demonstrations for K-12 students to teach them about the importance of protecting and conserving our valuable resources. We do this through engaging in-class and extra-curricular workshops, outdoor day camps and field experiences, and online lesson plans and educational resources.

*"I didn't know that there was so much life in there [Howe Creek]!"*  
**-Sage, Age 10**

*"Thank you very much for the wonderful workshop. Many students said it was their favourite field trip!"*  
**-Grade 4 teacher.**

[\*\*Learn More\*\*](#)

# Education: In The Classroom

---

## In-Class Workshops

Our Environmental Educator delivered 43 classroom workshops to 810 students and educators at 12 schools in 5 communities. Workshops covered theme areas such as salmon life cycle and habitat, watersheds and water cycles, local ecosystems, and climate change.

## Outdoor Field Experiences

This past spring, 455 students and teachers 6 schools participated in our outdoor field experiences at Howe Creek, Ferry Island or Lakelse Lake in Terrace, undertaking water quality testing and aquatic macroinvertebrate surveys.

**1,265** Students and educators directly reached through classroom and **65** outdoor field workshops at **12** schools in communities

[Learn More](#)

# Education: In The Community

**1,500+** Youth and adults directly reached through 15 events in 5 communities

## Youth Conservation Leadership

---

In partnership with BC Parks, we ran our first Youth Conservation Leadership Summer Camp at Lakelse Lake Provincial Park for youth ages 11 to 16 years to teach them about watershed science, and help them to develop the leadership skills necessary to become future stewards.

## Eco-Explorer Watershed Summer Camps

---

We developed and delivered several week-long outdoor camps for youth ages 5 to 11 years during the summer months, on non-instructional days, and after schools, directly reaching 112 youth in the Terrace area.

## Pop Up Nature Science Events

---

This past summer, we offered free events featuring hands-on activities. In its second year, we held 15 Pop Up Nature Science Events at community spaces and provincial parks in Terrace, Kitimat, Prince Rupert, the Nass Valley, and Hazelton directly reaching 1500+ youth and adults.

[Learn More](#)

# Community Engagement

*SkeenaWild has a deep relationship to this place and this place has a profound relationship with salmon. Our job is to defend those relationships. We strive to build connections, create dialogue, solicit feedback, and share information and stories about SkeenaWild's work and salmon-related issues. We do this through public community forums, digital media (videos, podcasts, social media and newsletters), social and educational programs, annual events, and conversations with neighbours, friends, and colleagues.*

## **Skeena Salmon Art Festival**

Once again, SkeenaWild helped to organize and sponsor the annual Skeena Salmon Arts Festival, a locally-curated, place-based art festival directing big investments into community public art projects. This year saw several new murals, banners, sculptures and the beloved art collective exhibit that traveled the northwest this summer and fall. This celebrated festival continues to generate energy and excitement throughout the region about Skeena salmon and the culture and communities connected to them.

## **The Skeena Squad**

Our volunteer program, "The Skeena Salmon Stewardship Squad" has a roster of 45 volunteers to work on riverside stewardship projects, including cleanups, invasive plant removal, and small habitat restoration projects. We hope to expand this program in the coming year to include more citizen science initiatives. Join the roster today!

## **Upstream: A SkeenaWild Podcast**

Now in its second season, our homegrown podcast series explores the Skeena region through its ecology, science and culture around salmon. It features interviews with SkeenaWild staff, highlighting who they are and the work they do, as well as our partners throughout the watershed. [All episodes are available on Apple, Spotify or SoundCloud.](#)

## **Keeping the public informed**

SkeenaWild regularly releases informational videos about issues that people care deeply about. We show up in media stories regularly. We've made several splashes this past year, whether from the release of the mining tailings database, our fisheries update videos, community events, or keeping folks up to date on the Ecstall River Landslide.

# SkeenaWild Film & Photo Festival

---

After a year off due to the pandemic, SkeenaWild brought the film and photo festival back in 2022. With a slightly different layout, we hosted our festival launch in Terrace at a sold out event. The festival was offered as a fundraising event opportunity for interested community groups and saw hostings in both Smithers and Prince Rupert. Stay tuned to find out the winners of this years festival.
